LE BOURGET, France • Talks on a global pact to fight global warming appeared to make progress late Friday, with some negotiators telling The Associated Press a deal was close.

Negotiators emerged from meetings with French Foreign Minister Laurent Fabius, the host of the talks, amid an air of optimism that had been lacking just hours earlier. Fabius was expected to present a new, potentially final draft of the elusive accord Saturday morning.

"We are pretty much there," Egyptian Environment Minister Khaled Fahmy, the chairman of a bloc of African countries, told the AP late Friday. "There have been tremendous developments in the last hours. We are very close."

A negotiator from a developed country was equally positive. "I think we got it," said the negotiator, who was not authorized to speak publicly.

Negotiators from more than 190 countries in Paris are aiming to create something that's never been done before: an agreement for all countries to reduce man-made emissions of carbon dioxide and other greenhouse gases and help the poorest adapt to rising seas, fiercer weather and other impacts of global warming.

This accord is the first time all countries are expected to pitch in - the previous emissions treaty, the 1997 Kyoto Protocol, only included rich countries.

The talks, originally scheduled to end Friday, dragged into an extra day as the French hosts said they needed more time to overcome disputes.

A French official expressed confidence that the draft to be presented Saturday would be the final one. The official was not authorized to speak publicly because the negotiations were ongoing.

Prime Minister Enele Sopoaga of the Pacific island nation of Tuvalu was also upbeat.

"The signals that have come to me give me encouragement that we are going to have a very ... comprehensive and strong agreement in Paris," Sopoaga told the AP.

Liu Zhenmin, deputy chief of the Chinese delegation, was more cautious. Asked by the AP whether the draft would be the final one, he said only if "it's more or less acceptable."

Climate negotiators say global deal is close in Paris

Earlier Friday, Liu stood firm on his nation's demand that rich countries should assume most responsibility for the costs and argued against an agreement that sets too-tough goals for weaning the world off using oil, gas and coal - the biggest source of carbon emissions.

The U.S. and European countries want to move away from so-called "differentiation" among economies and want big emerging countries such as China and India to pitch in more in a final **climate** deal.

Liu told reporters that that issue is "at the core of our concern for the Paris agreement." He said he wants different rules for different countries "clearly stipulated" in the global warming pact.

China is among the more than 180 countries that have submitted emissions targets for the new pact but is resisting Western proposals for robust transparency rules that would require each country to show whether it's on track to meet its target.

Liu also argued against sharply limiting the number of degrees the planet warms this century because that would involve huge lifestyle and economic **changes**.

"We need heating. We need air conditioning. You need to drive your car," he said.

Indian Environment Minister Prakash Javadekar also said differentiation was the biggest dispute and accused developed countries of not showing enough flexibility in the talks.

However, signs of divisions among major developing countries surfaced Friday as Brazil joined an informal coalition of Western countries and some developing ones in a "high-ambition coalition" that is calling for a strong deal.

Liu dismissed the coalition as a "performance."

U.S. Secretary of State Kerry, on his fifth straight day in France trying to iron out differences with developing countries, said he's "hopeful" for an accord and has been working behind the scenes to reach compromises.

The talks are the culmination of years of U.N.-led efforts to create a long-term **climate** deal. U.N. **climate** conferences often run past their deadlines, given the complexity and sensitivity of each word in an international agreement and the consequences for national economies.

Analysts said the delay until Saturday was not necessarily a bad sign.

"This needs consensus," said Michael Jacobs, an economist with the New **Climate** Economy project, speaking to reporters. "There's a lot of negotiating to do."

A 27-page draft released Thursday said governments would aim to peak the emissions of heat-trapping greenhouse gases "as soon as possible" and strive to reach "emissions neutrality" by the second half of the century - a vague term generally understood to mean no more emissions than the Earth can naturally absorb. That was weaker language than in previous drafts, which included more specific emissions cuts and timeframes.

China's Liu said negotiators don't understand what is meant by "neutrality" and argued for an even softer "low-carbon" goal.

The draft didn't resolve how to deal with demands from vulnerable countries to deal with unavoidable damage from rising seas and other **climate** impacts. One option said such losses would be addressed in a way that doesn't involve liability and compensation - a U.S. demand.

Fabius said the world would not find a better moment to reach a global **climate** deal. "All the conditions are met to reach a universal, ambitious agreement," he said.
